

# Get Cool Solutions, Not Hot Air

Ductless Systems

Ceiling Grid

Horizontal Configurations

Air-Cooled Floor-Mounted

Water-Cooled Small Footprint

100% Outside Air (Indoor)

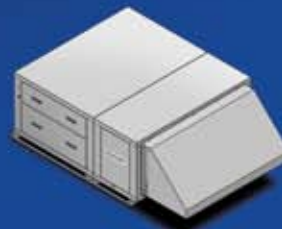

Variable Air Volume

Portable Air Conditioning (Horizontal & Vertical)

100% Outside Air (Rooftop)

Custom OEM

## A complete line of customizable air conditioning systems that leave the others on the shelf

Problems such as difficult air paths, space limitations and unique refrigerant circuit requirements are easily overcome with any of our units. We offer a wide variety of configurations for indoor and portable operation up to 70 tons that are easily customizable for conditions most off-the-shelf units can't even touch. Don't settle for a commodity unit when you can have an air conditioning system built to your specifications. United CoolAir is your single solution for commercial air conditioning units, portable and custom a/c package design.

# Comprehensive Solutions for Today's Environmental Requirements

United CoolAir manufactures a diverse and growing array of specialized light commercial air conditioning systems. Our units are full-featured, capable of delivering uncompromising performance for today's commercial, industrial and institutional markets.

United CoolAir products are designed and engineered primarily for indoor installation, a huge concern with properties having limited mounting locations or in high-rise buildings where outside space is non-existent. The line has expanded to include portable and temporary heating and cooling units built to endure the strains of continuous relocation.

## The Correct Air Conditioning Solution for Your Application

Air conditioning systems include popular and non-standard configurations such as horizontal, vertical, ductless, ceiling grid, SCAV, VAV and outside air units. The units can be located in plenums, closets or directly in the space. The ability to split the systems also provides added value for renovation, replacement or new construction projects.

## Saving Time and Labor

Anyone in the construction industry knows and appreciates the value of time. United CoolAir a/c systems are designed specifically to minimize site modifications and installation time. Units arrive pre-tested and charged from the factory and utilize re-sealable fittings. Replacement units can be tailored to match existing duct work and utilities with minimal installation changes. Renovation projects are simplified since the units will fit through standard doorways.

## Designed for Flexibility

United CoolAir units offer exceptional value because of their ability to adapt to changing applications and mechanical requirements, including alternate refrigerants. Units are built to order to deliver a singular unique solution not available using traditional systems. Lead-times for fabrication and shipping are typically ten weeks or less, and the use of standard components assures easy replacement if needed.

## Opening a Multitude of Installation Opportunities

The diversity of unit configurations and range of capacities extends layout flexibility not available with "off-the-shelf" systems. Indoor systems preserve the architectural integrity of your building, maintaining rooflines and allowing the use of alternative roofing materials. Indoor a/c systems overcome outdoor uniformity ordinances preventing outside units, and eliminate the fear of theft or damage to units in open areas. Flexible United CoolAir systems also present new opportunities for designers when designing space in new construction.

## Quality Construction for Reliability

Our team of skilled and dedicated people comprises many years of experience in the HVAC industry and feature an engineering application expertise that is second to none. We will deliver the right combinations of options and configurations to make your unit function as expected. Our commitment is to deliver reliable equipment of the highest quality for your complete satisfaction.

## Applications

- Schools
- Conference Rooms
- Telecommunications
- Retail Stores
- Night Clubs
- Sports Venues
